<b>1</b>	<b><i>Algorithms</i></b>	<b>11</b>
1.1	<i>Pretest</i>	12
1.2	<i>Algorithms and correctness</i>	15
	<i>Bounded linear search</i> 16 <i>Binary search</i> 24	
	<i>A linked list class</i> 32 <i>Selection sort</i> 37	
1.3	<i>Algorithms and efficiency</i>	43
	<i>A line-by-line analysis</i> 44	
	<i>Big-oh and big-theta defined formally</i> 52	
	<i>Constant factors</i> 59 <i>Recurrences</i> 62	
1.4	<i>Experiments</i>	65
	<i>Counting comparisons</i> 65 <i>Merge sort and quick sort</i> 73	
	<i>Measuring running time</i> 83	
	<i>Sorting algorithm summary</i> 87	
1.5	<i>Chapter summary</i>	91
<b>2</b>	<b><i>Data structures</i></b>	<b>93</b>
2.1	<i>Abstract data types</i>	94
	<i>The ADT cannon</i> 95 <i>Lists</i> 96	
	<i>Stacks and queues</i> 98 <i>Sets</i> 101	
	<i>Maps</i> 102 <i>Bags</i> 105	
2.2	<i>Array-based data structures</i>	111
	<i>Random access</i> 112 <i>ArrayList</i> 114	
	<i>Efficiency of an array</i> 117 <i>ArrayStack</i> 119	
2.3	<i>Linked data structures</i>	121
	<i>LinkedStack</i> 123 <i>Recursion in the node</i> 124	

## 2 CONTENTS

2.4	<i>Data structures built from abstractions</i>	129
	<i>Multi-dimensional arrays</i>	129
	<i>Ring buffers</i>	131
	<i>Linked trees</i>	133
2.5	<i>Data structures adapted from ADTs</i>	141
	<i>Lists adapted as stack and queues</i>	141
	<i>Lists adapted as maps</i>	144
	<i>Maps adapted as bags</i>	146
	<i>Bags adapted as sets</i>	147
2.6	<i>ADTs and data structures in other languages</i>	152
	<i>ADTs in C</i>	153
	<i>ADTs in SML</i>	167
	<i>ADTs in Python</i>	175
2.7	<i>Programming practices</i>	181
	<i>Assertions</i>	181
	<i>Nested classes</i>	182
	<i>Iterators</i>	186
	<i>Interfaces</i>	197
2.8	<i>The road ahead</i>	200
2.9	<i>Chapter summary</i>	204

## 3 Case studies 207

3.1	<i>Linear-time sorting algorithms</i>	208
	<i>Counting sort</i>	209
	<i>Radix sort</i>	213
	<i>Bucket sort</i>	218
3.2	<i>Disjoint sets and array forests</i>	223
	<i>The disjoint set ADT</i>	226
	<i>The array forest data structure</i>	228
	<i>Find and union strategies</i>	232
3.3	<i>Priority queues and heaps</i>	243
	<i>The priority queue ADT</i>	244
	<i>Brute force implementations</i>	245
	<i>The heap data structure</i>	251
	<i>Heap sort</i>	260
	<i>HeapPriorityQueue</i>	265
3.4	<i>N-Sets and bit vectors</i>	272
	<i>The N-set ADT</i>	275
	<i>The bit vector data structure</i>	279
3.5	<i>Skiplists</i>	286
	<i>Map data structure performance</i>	286
	<i>The skiplist data structure</i>	290
	<i>Skiplist performance</i>	293
3.6	<i>Chapter summary</i>	302

4	<i>Graphs</i>	305
4.1	<i>Concepts</i>	306
4.2	<i>Implementation</i>	311
	<i>Adjacency list and adjacency matrix</i>	314
	<i>Space and time efficiency</i>	320
	<i>Weighted graphs</i>	324
4.3	<i>Traversal</i>	327
	<i>Breadth-first and depth-first</i>	329
	<i>Implementing traversal algorithms</i>	334
	<i>The complexity of traversal</i>	340
4.4	<i>Minimum spanning trees</i>	347
	<i>The MST problem</i>	349
	<i>Kruskal's algorithm</i>	354
	<i>Prim's algorithm</i>	361
	<i>Performance</i>	366
4.5	<i>Shortest paths</i>	370
	<i>The SSSP problem</i>	371
	<i>The Bellman-Ford algorithm</i>	377
	<i>Dijkstra's algorithm</i>	381
	<i>Routing algorithms</i>	386
4.6	<i>Chapter summary</i>	392
5	<i>Search trees</i>	397
5.1	<i>Binary search trees</i>	398
	<i>Iterative implementation</i>	402
	<i>recursive implementation</i>	408
	<i>Object-oriented recursive implementation</i>	410
	<i>Performance</i>	415
5.2	<i>The balanced tree problem</i>	419
5.3	<i>AVL trees</i>	427
	<i>Violations</i>	428
	<i>Implementation</i>	433
	<i>Performance</i>	438
5.4	<i>Traditional red-black trees</i>	441
	<i>Insertion</i>	447
	<i>Deletion</i>	453
	<i>Performance</i>	461
5.5	<i>Left-leaning red-black trees</i>	464
	<i>Insertion</i>	466
	<i>Deletion</i>	470
	<i>Performance</i>	474
5.6	<i>B-trees</i>	479

## 4 CONTENTS

	<i>Two-three trees</i>	480	<i>Deriving B-trees</i>	490
	<i>Implementing B-trees</i>	494	<i>Insertion</i>	499
	<i>Performance</i>	507		
5.7	<i>Chapter summary</i>	510		
6	<i>Dynamic programming</i>	513		
6.1	<i>Overlapping subproblems</i>	514		
	<i>Characterizing coin-changing</i>	519		
	<i>Computing the best bag of coins</i>	527		
6.2	<i>Three problems</i>	531		
	<i>The knapsack problem</i>	531		
	<i>The longest common subsequence problem</i>	536		
	<i>The optimal matrix multiplication problem</i>	539		
6.3	<i>Elements of dynamic programming</i>	543		
6.4	<i>Three solutions</i>	547		
	<i>A solution to the knapsack problem</i>	547		
	<i>A solution to the the longest common subsequence problem</i>	551		
	<i>A solution to the optimal matrix multiplication problem</i>	554		
6.5	<i>Optimal binary search trees</i>	563		
	<i>The optimal BST problem</i>	565		
	<i>Building tables</i>	571		
6.6	<i>Natural-breaks classification</i>	576		
	<i>Recursive formulation</i>	581		
	<i>A dynamic-programming algorithm</i>	583		
6.7	<i>Chapter summary</i>	587		
7	<i>Hash tables</i>	591		
7.1	<i>Hash table basics</i>	592		
7.2	<i>Separate chaining</i>	601		
	<i>Design</i>	601	<i>Implementation</i>	604
7.3	<i>Open addressing</i>	608		
	<i>Basic implementation</i>	610	<i>Deletion</i>	615
	<i>Alternate probe strategies</i>	620		
7.4	<i>Hash functions</i>	629		
	<i>Integer hash functions</i>	632		
	<i>String hash functions</i>	641		

7.5	<i>Perfect hashing</i>	647
	<i>Universal hash functions</i>	648
	<i>Design of the table</i>	652
7.6	<i>Chapter summary</i>	656
8	<i>String processing</i>	659
8.1	<i>Sorting algorithms for strings</i>	664
	<i>String quick sort</i>	666
	<i>String bucket sort</i>	671
	<i>String radix sort</i>	674
8.2	<i>Tries</i>	678
	<i>Abstraction</i>	679
	<i>Implementation</i>	682
8.3	<i>Huffman encoding</i>	691
	<i>Text encoding schemes</i>	692
	<i>Building the key</i>	699
	<i>Optimality</i>	702
8.4	<i>Edit distance</i>	708
8.5	<i>Grammars</i>	714
	<i>Recursive descent parsing</i>	717
	<i>CKY parsing described</i>	728
	<i>CKY parsing implemented</i>	734
8.6	<i>Chapter summary</i>	738
	<i>Index</i>	741
