Chapter 4, Graphs:

- Concepts and implementation (**Today**)
- Traversal (Wednesday *and in lab Thursday*)
- Minimum spanning trees (Friday and next week Monday)
- Single-source shortest paths (next week Wednesday and Friday)
- (Test 1, Wednesday, Oct 15 (week-after Wednesday))

Today:

- Applications of graphs
- Vocabulary, taxonomy, and theory
- Representing and implementing graphs

Indicate the worst case running time for each operation in each implementation of a priority queue.

	ListPriorityQueue	SortedListPriorityQueue	HeapPriorityQueue
`insert()`	$\Theta(1)$	$\Theta(n)$	$\Theta(\lg n)$
`max()`	$\Theta(n)$	$\Theta(1)$	$\Theta(1)$
`extractMax()`	$\Theta(n)$	$\Theta(1)$	$\Theta(\lg n)$
`contains()`	$\Theta(n)$	$\Theta(n)$	$\Theta(n)$

Propane

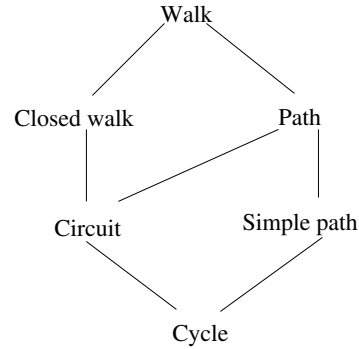
- Graph
- Vertex (compare *node*)
- Edge (compare *link*)
- Directed graph
- Undirected graph
- Incident
- Adjacent
- Degree (in-degree and out-degree)
- Complete
- Dense
- Sparse
- Parallel edge
- Self loop
- Simple graph
- Weighted graph

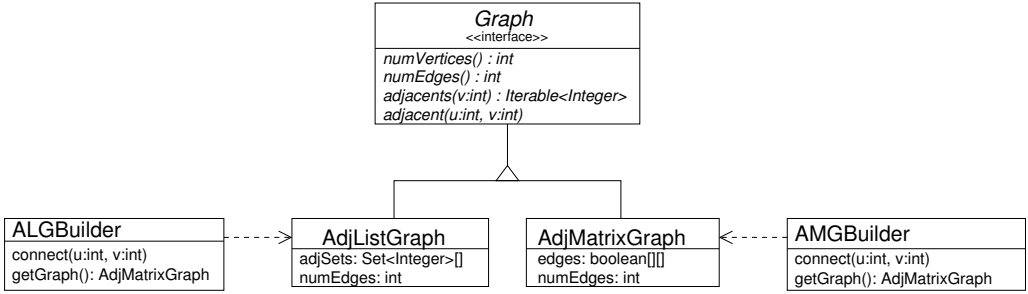
Adjectives

Trivial	Having only one vertex and no edges.
Simple	Having no repeated *vertices* (except, possibly, the initial and terminal).
Closed	Having the same vertex as initial and terminal.

Nouns

Walk	An alternating sequence of vertices and edges, each edge coming between its end points.
Path	A walk with no repeated *edge* (repeated vertices are ok).
Circuit	A closed path (no repeated edges, initial and terminal the same).
Cycle	A simple circuit (no repeated edges or vertices, except the initial and terminal, which are the same).





Graph
<<interface>>
numVertices() : int
numEdges() : int
adjacents(v:int) : Iterable<Integer>
adjacent(u:int, v:int)
ALGBuilder
connect(u:int, v:int)
getGraph(): AdjMatrixGraph
AdjListGraph
adjSets: Set<Integer>[]
numEdges: int
AdjMatrixGraph
edges: boolean[][]
numEdges: int
AMGBuilder
connect(u:int, v:int)
getGraph(): AdjMatrixGraph

	Adjacency matrix	Adjacency list
Space	$\Theta(V^2)$	$\Theta(V + E)$
`adjacent(u, v)`	$\Theta(1)$	$\Theta(deg(u))$ (expected case)
`getAdjacents(u)`	$\Theta(V)$	$\Theta(deg(u))$

Coming up:

Do **heaps and priority queue** *project (Fri, Oct 3)*

Due **Thurs, Oct 2***:*
Read Sections 4.(1-3) This is a big chunk—spread it out!
Do Exercises 4.1 and 4.19
Take "graph concepts, implementation, and traversal" quiz
