

Chapter 8, Strings:

- ▶ General introduction; string sorting (**Today**)
- ▶ Tries (next week Monday)
- ▶ Other string topics (next week Wednesday)
 - ▶ Regular expressions
 - ▶ ~~Huffman encoding~~
 - ▶ ~~Edit-distance~~
 - ▶ ~~Grammars and parsing~~

Today:

- ▶ Why we care about strings
- ▶ Sorting strings
 - ▶ String quick sort
 - ▶ String bucket sort
 - ▶ String radix sort

End-of-semester important dates

- ▶ Tues, Dec 2: Test 4 practice problems made available. ✓
- ▶ Thurs, Dec 4: Last “normal” lab ✓
- ▶ Mon, Dec 8: Last project assigned
- ▶ Tues, Dec 9: Last “normal” running of project grading script
- ▶ Wed, Dec 10: Test 3 & 4 Review sheet distributed.
- ▶ Thurs, Dec 11: Review lab (pick practice problems for Test 4)
- ▶ Fri, Dec 12, AM: “Two-minute warning” running of project grading script (Canvas gradebook will not be updated—see project report in your turn-in file)
*Note that Fri, Dec 12 is the *Last Day of Classes*.*
- ▶ Fri, Dec 12, 11:59 PM: Official project deadline
- ▶ Sat, Dec 13, when I wake up: Permissions to turn-in folders turned off
- ▶ Mon, Dec 15: Project grading script run for final/semester grades
- ▶ Thurs, Dec 18, 10:30am-12:30pm: Tests 3 and 4 (in lab)

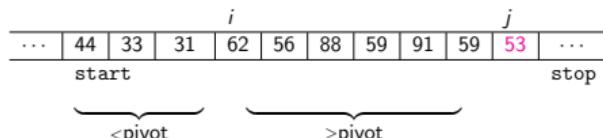

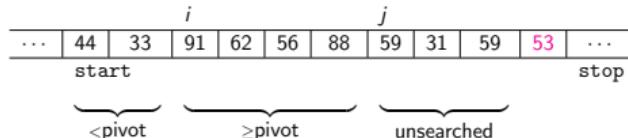

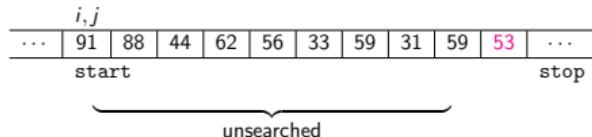

Why we care about strings

- ▶ Strings are different
- ▶ Strings are common
- ▶ Strings are a representative example

```
public class DNASequence {  
    /** An alphabet for DNA */  
    private static enum Nucleotide { A, C, G, T }  
    /** The string of nucleotides */  
    private Nucleotide[] sequence;  
}
```

```
public class BigInt {  
  
    private byte[] digits;  
  
    /** Compute the sum of this and another BigInt. */  
    public BigInt add(BigInt other) {  
        // The result object  
        BigInt sum = new BigInt();  
        // The result object has at most one more digit  
        // than the larger number of digits of the two addends  
        sum.digits = new byte[(digits.length > other.digits.length?  
            digits.length : other.digits.length) + 1];  
        // Add by column  
        int carry = 0;  
        for (int i = 0; i < sum.digits.length; i++) {  
            // Digits in current columns of the two addends  
            int a = digits.length <= i? digits[i] : 0;  
            int b = other.digits.length <= i ? other.digits.length : 0;  
            // The sum of the current digits plus carry from previous iteration  
            int s = a + b + carry;  
            // Mod that sum by 256 to get the appropriate digit in result,  
            // divide to get the carry for next time.  
            sum.digits[i] = (byte) (s % 256);  
            carry = s / 256;  
        }  
        assert carry == 0;  
        return sum;  
    }  
}
```

Quick sort:

Invariant 11 (Loop of partition())

- (a) $\text{start} \leq i \leq j < \text{stop}$.
- (b) $\forall k \in [\text{start}, i), \text{sequence}[k] < \text{sequence}[\text{stop} - 1]$.
- (c) $\forall k \in [i, j), \text{sequence}[k] \geq \text{sequence}[\text{stop} - 1]$.
- (d) $j - \text{start}$ is the number of iterations completed.

unsearched

Invariant 40. [Loop of `string_quick_sort_r()`]

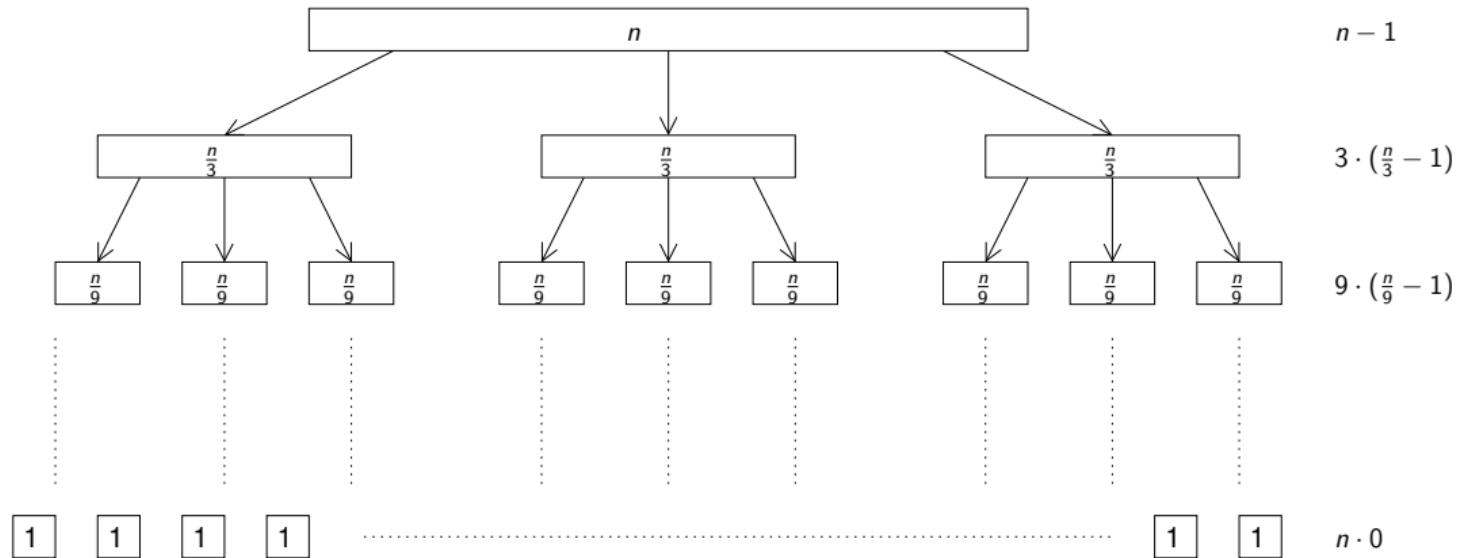

Let c be the character in position pre in the string in position $\text{stop} - 1$.

- (a) $\text{start} \leq i \leq j \leq k < \text{stop}$
- (b) (Informal) For all the strings in range $[\text{start}, i)$, their character in position pre is less than c .
- (c) (Informal) For all the strings in range $[i, j)$, their character in position pre is equal to c .
- (d) (Informal) For all the strings in range $[j, k)$, their character in position pre is greater than to c .
- (e) $k - \text{start}$ is the number of iterations completed.

Invariant 41. [Precondition of `string_quick_sort_r()`]

$\forall i, j \in [\text{start}, \text{stop}), \forall x \in [0, \text{pre}), \text{sequence}[i][x] = \text{sequence}[j][x]$.
