Which of the following are true?

$$-((x - y) + (x - z)) = -(x - y) - (x - z)$$
$$-((x - y) + (x - z)) \cdot z = -(x - y) - (x - z) \cdot z$$
$$\sim (p \land q) \equiv \sim p \lor \sim q$$
$$\sim (p \land q) \land r \equiv \sim p \lor \sim q \land r$$

Which of the following are true?

$$(x + y) + z = x + (y + z)$$
$$(x - y) + z = x - (y + z)$$
$$(p \lor q) \lor r \equiv p \lor (q \lor r)$$
$$(p \lor q) \land r \equiv p \lor (q \land r)$$

1. Write a function leastSigDigs that takes a list of ints and returns a list of the least significant digits in those lists. For example, leastSigDigs[283, 7234, 5, 2380] would return [3, 4, 5, 0].

2. Write a function hasEmpty that takes a list of lists (of any type) and determines whether or not the list of lists contains an empty list. For example, hasEmpty([[1,2,3], [4,5], [], [6,7]]) would return true.
