

Chapter 3, Case Studies:

- ▶ Linear-time sorting algorithms (**Monday and Wednesday**)
- ▶ Disjoint sets and array forests (Friday)
- ▶ Priority queues (next week monday)
- ▶ N -sets and bit vectors (next week Wednesday)

Today (and Wednesday):

- ▶ Recent quiz problem
- ▶ Intro to “case studies”
- ▶ Limitations of comparison-based sorting
- ▶ Counting sort
- ▶ Radix sort

ArrayList

LinkedList

get()

set()

add()

ADTs

List
Stack
Queue
Map
Set
Bag

Data structures

Array
Linked list
Multi-dimensional array
Ring buffer

Can't you tell a good tree from a poor tree?

Good sorts

Merge

Quick (expected case)

Shell (unassigned project)

Heap (Section 3.3)

Bad sorts

Selection

Insertion

Bubble

I have just been thinking, and I have come to a very important decision. These are the wrong sort of bees.

You can't
comparison-sort
in linear time.
But there are
alternatives to
comparisons.

Coming up:

Do “basic data structures” practice problems (suggested by today)

Do “implementing ADTs” project (suggested by Wed, Feb 1)

*Due **Wed, Feb 1:** (class time)*

Read Section 3.1

Do Exercises 2.(22–24)

Take sorting quiz

*Due **Fri, Feb 3:** (end of day)*

Read Section 3.2

Do Exercises 2.(12 & 16) and 3.8.

Take disjoint sets quiz

```
static Node arrayToList1(int[] array) {
    Node toReturn = new Node(array[0], null);
    for (int i = 1; i < array.length; i++) {
        Node current = toReturn;
        while (current.next() != null)
            current = current.next();
        current.setNext(new Node(array[i], null));
    }
    return toReturn;
}
```

```
Node arrayToList2(int[] array) {
    Node toReturn = null;
    for (int i = array.length - 1; i >= 0; i--)
        toReturn = new Node(array[i], toReturn);
    return toReturn;
}
```

```
static int[] listToArray(Node head) {
    int size = 0;
    for (Node current = head; current != null; current = current.next())
        size++;
    int[] toReturn = new int[size];
    int i = 0;
    for (Node current = head; current != null; current = current.next())
        toReturn[i++] = current.datum();
    return toReturn;
}
```

Invariant (Loop of radix_sort)

- (a) i is the number of iterations completed.
- (b) $r_pow = r^i$.
- (c) $\forall k \in [0, n - 1), \text{sequence}[k] \bmod r^i \leq \text{sequence}[k + 1] \bmod r^i$
