

Where we are:

- ▶ Making types in SML (last week Wednesday)
- ▶ Functions in SML (last week Friday)
- ▶ Lists (Monday)
- ▶ Functions on lists (Wednesday)
- ▶ Powersets; a language processor (**Today**)
- ▶ Propositional forms, logical equivalence [Start Chapter 3] (next week Monday)

Today:

- ▶ A couple more list examples
- ▶ Powersets
  - ▶ Definition
  - ▶ Exploration
- ▶ A language processor
  - ▶ Case expressions and option types
  - ▶ The language processor itself
  - ▶ Introducing the semester project

## Review

- ▶ List literals: `[1, 4, 12, 3]`, `[]`
- ▶ Analytic operations: `hd`, `tl`
- ▶ Synthetic operations: `::` (`cons`), `@` (`cat`)
- ▶ Lists vs tuples
- ▶ Type analysis problems :

- ▶ Lists as models for sets

## Powersets

- ▶ Informal definition: The powerset of a set is the set of all subsets of that set.
- ▶ Formal definition: The powerset of a set  $X$  is

$$\mathcal{P}(X) = \{ Y \mid Y \subseteq X \}$$

- ▶ For “set of sets,” think “box of boxes.”
- ▶ Examples:

Why powersets seem to throw some people:

- ▶ The elements of a powerset are themselves sets.
- ▶ Suppose  $X \subseteq U$ . Then
  - ▶ If  $x \in X$ , then  $x \in U$
  - ▶  $\mathcal{P}(X) \not\subseteq U$ , but rather  $\mathcal{P}(X) \subseteq \mathcal{P}(U)$
  - ▶ If  $A \in \mathcal{P}(X)$ , then  $A \in \mathcal{P}(U)$
- ▶  $\mathcal{P}(\emptyset) = \{\emptyset\} \neq \emptyset$ .  $|\emptyset| = 0$ , but  $|\{\emptyset\}| = 1$

Which are true?

$$\{3\} \in \mathcal{P}(\{1, 2, 3, 4, 5\})$$

$$3 \in \mathcal{P}(\{1, 2, 3, 4, 5\})$$

$$\{3\} \subseteq \mathcal{P}(\{1, 2, 3, 4, 5\})$$

$$3 \subseteq \mathcal{P}(\{1, 2, 3, 4, 5\})$$

$$a \in A \text{ iff } \{a\} \in \mathcal{P}(A)$$

$$a \in A \text{ iff } \{a\} \subseteq \mathcal{P}(A)$$

$$A \subseteq B \text{ iff } A \subseteq \mathcal{P}(B)$$

$$A \subseteq B \text{ iff } A \in \mathcal{P}(B)$$

Which are true?

$$\{A\} \subseteq \mathcal{P}(A)$$

$$A \in \mathcal{P}(A)$$

$$\{A\} \in \mathcal{P}(A)$$

$$\mathbb{Z} \in \mathcal{P}(\mathbb{R})$$

$$\emptyset \in \mathcal{P}(A)$$

$$\emptyset = \mathcal{P}(\emptyset)$$

Note that

- ▶  $a \in A$  iff  $\{a\} \in \mathcal{P}(A)$
- ▶  $A \subseteq B$  iff  $A \in \mathcal{P}(B)$
- ▶  $A \subseteq B$  iff  $\mathcal{P}(A) \subseteq \mathcal{P}(B)$
- ▶  $\mathcal{P}(\emptyset) = \{\emptyset\} \neq \emptyset$

Observe

$$\begin{aligned}\mathcal{P}(\{1, 2, 3\}) &= \{ \emptyset \\ &\quad \{1\}, \{2\}, \{3\} \\ &\quad \{1, 2\}, \{1, 3\}, \{2, 3\} \\ &\quad \{1, 2, 3\} \} \\ &= \{ \{1\}, \{1, 2\}, \{1, 3\}, \{1, 2, 3\} \\ &\quad \emptyset, \{2\}, \{3\}, \{2, 3\} \} \\ &= \mathcal{P}(\{2, 3\}) \cup \left[ \begin{array}{l} \text{1 added to each set} \\ \text{of } \mathcal{P}(\{2, 3\}) \end{array} \right] = \mathcal{P}(\{2, 3\}) \cup \\ &\quad \{ \{1\} \cup X \mid X \in \mathcal{P}(\{2, 3\}) \}\end{aligned}$$

If  $a \in A$ , then  $\mathcal{P}(A) = \mathcal{P}(A - \{a\}) \cup \{ \{a\} \cup X \mid X \in \mathcal{P}(A - \{a\}) \}$

What is  $|\mathcal{P}(X)|$  in terms of  $|X|$ ?

## Grammar:

*Sentence* → *NounPhrase Predicate PrepPhrase<sub>opt</sub>*

*NounPhrase* → *Article Adjective<sub>opt</sub> Noun*

*Predicate* → *Adverb<sub>opt</sub> VerbPhrase*

## Grammar, continued:

*VerbPhrase* → { *TransitiveVerb NounPhrase*  
*IntransitiveVerb*  
*LinkingVerb Adjective*

*PrepPhrase* → *Preposition NounPhrase*

## **Vocabulary:**

Articles: a the

Adjectives: big bright fast beautiful smart red smelly

Nouns: man woman dog unicorn ball field flea tree

Adverbs: quickly slowly happily dreamily

Transitive verbs: chased saw greeted bit loved

Intransitive verbs: ran slept sang

Linking verbs: was felt seemed

Prepositions: in on through with

**For next time:**

*Take "follow-up quiz"*

*Pg 74: 2.2.(13, 15)*

*Pg 82: 2.4.(8-12, 14 & 15)*

*Read 3.(1-4)*

*Take quiz*
