Chapter 3 outline:

- Propositions, boolean logic, logical equivalences. **Game 1** (last week Friday)
- Conditional propositions. **SML** (Today)
- Arguments. **Game 2** (Wednesday)
- Predicates and quantification. **SML** (Friday)
- Quantified arguments. **Game 3** (Next week Monday)
- Review for test. (Next week Wednesday)
So far:

- $\mathbb{B} = \{ T, F \}, \land, \lor, \sim$, propositional calculus
- Verifying logical equivalences between propositional forms (Game 1)

Today—how to model propositional forms that have an if/then structure (§3.(5–7)):

- Highlight the most important parts
- Highlight the most confusing parts
- Work on some SML examples
<table>

If \(12\) divides \(36\) evenly, then \(3\) divides \(72\) evenly.

If \(3 < 72\), then \(3\) divides \(72\) evenly.

If \(12\) divides \(36\) evenly, then \(72 < 3\).

If \(72 < 3\), then \(3\) divides \(72\) evenly.

If \(72 < 3\), then \(12\) divides \(3\) evenly.
1. Bob passed through $P$.
2. Bob passed through $N$.
3. Bob passed through $M$.
4. If Bob passed through $O$, then Bob passed through $F$.
5. If Bob passed through $K$, then Bob passed through $L$.
6. If Bob passed through $L$, then Bob passed through $K$.

Based on example by Susanna Epp, 2006
“If Fred was at the dock at midnight, then he’s the murderer.”

“If it’s raining at home and the windows are still open, then water is coming in.”

“If I were John and John were me, then he’d be six and I’d be three.” — A. A. Milne

“If the dryer is finished, then unload it.”

“If you finish your spinach, then I will give you some cake.”

“If it rains tomorrow, the zucchini will sprout.”
An even degree is a **necessary condition** for a polynomial to have no real roots. *means*
If a polynomial function has no real roots, then it has an even degree.

A positive global minimum is a **sufficient condition** for a polynomial to have no real roots.
*means*
If a polynomial function has a positive global minimum, then it has no real roots.

Values all of the same sign is a **necessary** and **sufficient** condition for a polynomial to have no real roots.
*means*
A polynomial function has values all of the same sign if and only if the function has no real roots.

Conditional expression:

if (expr1) then (expr2) else (expr3)
For next time:

*Pg 108: 3.5.(1 & 2)*

*Pg 114: 3.7.(1, 2, 7, 8, 9, 12, 13)*

*Take quiz*

*Read 3.(8 & 9)*
