Where we are:

- More about functions in SML; introduction to lists (this past Friday)
- Functions on lists; powersets (today)
- Application: A language processor (Wednesday)
- Propositional forms, logical equivalence [Start Chapter 3] (Friday)

Today:

- Functions on lists
  - Examples
  - Principles
  - Practice
- Powersets
  - Definition
  - Exploration
Review

- List literals: [1, 4, 12, 3], []
- Analytic operations: hd, tl
- Synthetic operations: :: (cons), @ (cat)
- Lists vs tuples
- Type analysis problems:

\[
[\text{tl}(\text{[5, 12, 6]})) @ \text{[8, 9]}]
\]

- Lists as models for sets
Powersets

- Informal definition: The powerset of a set is the set of all subsets of that set.
- Formal definition: The powerset of a set $X$ is

$$\mathcal{P}(X) = \{ Y \mid Y \subseteq X \}$$

- For “set of sets,” think “box of boxes.”
- Examples:
Why powersets seem to throw some people:

- The elements of a powerset are themselves sets.
- Suppose $X \subseteq U$. Then
  - If $x \in X$, then $x \in U$
  - $\mathcal{P}(X) \not\subseteq U$, but rather $\mathcal{P}(X) \subseteq \mathcal{P}(U)$
  - If $A \in \mathcal{P}(X)$, then $A \in \mathcal{P}(U)$
- $\emptyset \neq \{\emptyset\}$. $|\emptyset| = 0$, but $|\{\emptyset\}| = 1$
Which are true?

\[ \{3\} \in \mathcal{P}(\{1, 2, 3, 4, 5\}) \quad \quad 3 \in \mathcal{P}(\{1, 2, 3, 4, 5\}) \]

\[ \{3\} \subseteq \mathcal{P}(\{1, 2, 3, 4, 5\}) \quad \quad 3 \subseteq \mathcal{P}(\{1, 2, 3, 4, 5\}) \]

\[ a \in A \iff \{a\} \in \mathcal{P}(A) \quad \quad a \in A \iff \{a\} \subseteq \mathcal{P}(A) \]

\[ a \in A \iff \{a\} \subseteq \mathcal{P}(A) \quad \quad A \subseteq B \iff A \in \mathcal{P}(B) \]
Which are true?

\[ A \subseteq B \text{ iff } A \subseteq \mathcal{P}(B) \quad \{A\} \subseteq \mathcal{P}(A) \]

\[ A \in \mathcal{P}(A) \quad \{A\} \in \mathcal{P}(A) \]

\[ \mathbb{Z} \in \mathcal{P}(\mathbb{R}) \quad \emptyset = \mathcal{P}(\emptyset) \]
Note that

- $a \in A$ iff $\{a\} \in \mathcal{P}(A)$
- $A \subseteq B$ iff $A \in \mathcal{P}(B)$
- $A \subseteq B$ iff $\mathcal{P}(A) \subseteq \mathcal{P}(B)$
- $\mathcal{P}(\emptyset) = \{\emptyset\} \neq \emptyset$
Observe

\[
\mathcal{P}(\{1, 2, 3\}) = \begin{cases}
\emptyset \\
\{1\}, \{2\}, \{3\} \\
\{1, 2\}, \{1, 3\}, \{2, 3\} \\
\{1, 2, 3\}
\end{cases}
= \begin{cases}
\emptyset, \{2\}, \{3\}, \{2, 3\} \\
\{1\}, \{1, 2\}, \{1, 3\}, \{1, 2, 3\}
\end{cases}
\]

\[
= \mathcal{P}(\{2, 3\}) \cup \begin{bmatrix} 1 \text{ added to each set of } \mathcal{P}(\{2, 3\}) \end{bmatrix} = \mathcal{P}(\{2, 3\}) \cup \{ \{1\} \cup X \mid X \in \mathcal{P}(\{2, 3\}) \}
\]

If \( a \in A \), then \( \mathcal{P}(A) = \mathcal{P}(A - \{a\}) \cup \{ \{a\} \cup X \mid X \in \mathcal{P}(A - \{a\}) \} \)
What is $|\mathcal{P}(X)|$ in terms of $|X|$?
For next time:

If you had trouble on the programming problems from last time, ask for help and try again.

Pg 74: 2.2.(2, 3, 8, 9, 11, 13, 15)

See notes on Ex 2.2.8 and 2.2.9 on the Schoology description of the assignment. See also the code from class for “starter code.”

Review 2.4 as necessary
Read carefully 2.5
